

Section 4.2 Work Package 2 - Hydrology and Upstream Source Evaluation: The TCEQ provided comments to EPA on the Draft Work Package 2 on 08-31, 09-13 and 09-18-2006. EPA's contractor provided a response to comments on 09-27-2006 that addressed relevant comments specific to sampling and indicated the JDG would address the remaining comments at a later date. Even though EPA approved the response to comments and revised Work Package 2 on 09-27-2006, it is still not clear as to how the remaining comments will be addressed and in what documentation. Please provide clarification.

Section 4.4 Work Package 4- Feasibility Study Engineering Data: The text indicates this Work Package is dependent on several factors including data collected as part of Work Packages 1 and 2. Will the comments provided on Work Package 2 in which no response was provided to date be addressed in Work Package 4? Specifically, It is not clear as to how the hydrodynamic modeling as proposed in Work Package 2 will be used to evaluate potential remedies as part of the Work Package 4.
